

## POWER PRODUCTS

### FIVE STAR 6.4L CONVERTER

ATS has released its Five Star torque converter for Ford's '08 to '10 5R110 TorqShift automatic transmission. Units feature its patented five-disc lockup clutch pack for ultimate power transfer. Its re-engineered and widened turbine and impeller design allows the stall speed rpm to remain in the effective torque range of the engine. Other upgrades include replacing factory stamped-steel components with billet-machined versions and installing metal roller bearings in place of plastic OE units. Its converter is said to hold up to 2,000 lb-ft of torque.

### LOCKING TIE-DOWN STRAP

Tired of your cargo working itself loose in the bed of your truck? Lockstraps has come up with a tie-down that utilizes two combination-locking carabiners (instead of S hooks) to secure whatever you're hauling. For added strength, a braided stainless steel cable is sewn throughout the entire length of the strap. Industrial-strength rivets and a built-in, soft-tie extension are also included. Lockstraps are 8½ feet long and retail for \$44.95.

### CLASS 8 PERFORMANCE

If you're looking for more performance and better fuel economy from your Class 8 truck, TS Performance has the answer. Its MP-HD module monitors an engine's fuel actuators and optimizes the duration of fuel delivery at each injector, and across the entire rpm range. The result is a mileage bump of up to ¾ mpg and up to a 30 percent increase in power. Modules are now available for Cummins ISX, Caterpillar, and Detroit 60 Series engines, and Mack, Volvo, and International MaxxForce engines will soon be supported.
